

**Feedback to the organizers and the sponsors (Albert-Einstein-Institut, Walter und Eva Andrejewski-Stiftung, SFB 647 Space-Time-Matter, Universität Potsdam, Universität Tübingen):**

*Mathematical and physical content:*

In what respect did your mathematical knowledge and intuition about General Relativity improve?

In what respect did your physical knowledge and intuition about General Relativity improve?

Which new insights did you gain during the workshop?

Which topic(s) did you find most/least interesting? Why?

Do you think that new collaborations could potentially grow out of the connections you made during the Andrejewski days?

What did you take away from the experimental feedback sessions about your talk (if applicable) and about other people's talks?

### *Program and schedule*

Did you find the exercise sessions appropriate? What would you improve?  
How do you feel about the number of talks by the participants? Too few? Too many?

Would you have appreciated more broader scope evening activities? Which ones?

If you participated in the excursion, did you feel it fit into the program?

Do you think that the schedule was overall appropriate? Too dense? Too stretched?

Did the schedule leave enough time for discussions and leisure time?

### *Organization*

Did you feel well informed about the program, the schedule, the funding, travel, etc. before and during the workshop?

If we organize a similar event in five years again, what would you change, what would you keep, what did you miss?  
Location, venue, food, technical equipment, lecturers, exercise sessions, other activities, time management, duration, number of participants, selection of participants, application procedure, funding, etc.
